## Personal Profile

I am a postdoctoral researcher at the University of Luxembourg under the supervision of Prof. Massimiliano Esposito. My Ph.D. in physics was obtained from the University of São Paulo, Brazil, where intensive research and teaching activities were developed. I am an active researcher in statistical physics; my main goal is to understand and tame fluctuations in systems out of thermal equilibrium, alongside their thermodynamic properties. In particular, I investigate systems undergoing phase transitions, heat engines, stochastic thermodynamics, coarse-graining, applications to biophysics and chemistry, and the interplays between them.
